

How to Apply your Lightroom Mobile Presets

It's time to make some photo magic!

In this guide you'll learn how to apply your new mobile Lightroom preset

Step 1

Download the Lightroom Mobile App (It's FREE!)

Step 2

Unzip your downloaded files

- With your iPhone or iPad, just tap on the zipped file, and it will unzip.
- If you are on an Android phone, you will need to download the Files by Google or WinZip app (Android app) to your phone.

Step 3

Locate your saved preset files

Locate your unzipped files on your phone or device.

THE DNG FILES are the only files you will need for the Lightroom Mobile app.

Step 4

Adding your preset files to the Lightroom mobile app

- With your iPhone or iPad, just tap on the zipped file, and it will unzip.
- If you are on an Android phone, you will need to download the Files by Google or WinZip app (Android app) to your phone.

To add a preset to Lightroom Mobile, select a collection in Lightroom where you will import the preset files. Next, click on the (...) settings icon in the app's top-right corner.

In the options that open at the bottom of the screen, choose the **Add Photos** option. When the options menu opens, choose the location you will be pulling the DNG/Preset files from—this is the location where you saved the DNG files after they were unzipped.

- If you have saved them to your phone, choose "**From Camera Roll.**"
- If you have saved them to a cloud storage option, choose "**From Files.**"

Select the DNG/Preset files you would like to import. This step may be a little different depending on your mobile phone. However, most phones offer a way to select multiple files/images.

Important to note:

Preset files are DNG files. When you initially open the image, you may get an error that says, "*Cannot Load File.*" This is normal. Press the checkmark in the corner anyway.

Oh, and you're doing great!

Step 5

Create your preset from the DNG files

Click on one of the newly imported files, then click on the three dots inside a circle in the upper right-hand corner of the screen. From there, choose "**Create Preset**" from the menu that appears.

Step 6 :

Create magic with your new presets!

Select an image of your choice in the Lightroom Mobile App that you're ready to edit. Swipe left on the bottom options until you see "**Presets**" and tap on that option. It will open with your most recently used preset collection. By tapping on the collection name, you can choose the new collection you just installed.

Click through the presets until you find the one you like. When you are finished adding your preset, click the checkmark in the lower right corner.

Lastly, enjoy your photos and start posting!

Friendly Reminder:

All presets no matter where they're from, will need some adjusting since every photo varies in lighting and coloring.

Quick edit actions like adjusting your exposure, white balance and temperature can be just the quick fix you need!

If you find that you're still having difficulty applying your preset from Social Collective please drop us a note!
